

## Oracle ERP Cloud Solutions for the Public Sector

The government's current policy of Cloud-First, means that many public sector organisations are looking at transitioning their finance and budgeting solutions to a digital model. However, the business case for transitioning needs to have a wider foundation than the Cloud-First policy and Inoapps sees the public sector benefiting from Oracle's Modern Best Practice Business Flows and ERP Cloud services in the following ways:

### **Spend Control and Budget Management**

Put your budget holders in the driving seat; with Oracle ERP and EPM Cloud, you can successfully devolve budget ownership and management to your service areas. Your budget holders will be able to access historic trends and use this information to accurately prepare their budget forecasts, combining this with real-time transactional data to monitor actuals against budgets. This model frees up your finance team to provide qualitative value-added services to your organisation, by reducing the pull on their time associated with preparing and managing budgets on behalf of budget holders.

### **Real-time Information**

Improve ownership and accountability of budget holders and decision makers, by providing access to real-time information. Access to up to the minute and accurate financial information will reduce your organisation's dependence on offline data sources, improving efficiency, accountability and establishing a 'single view of the truth'.

### **Automation & Self Service**

Improve the accuracy and relevance of your information flows whilst reducing the operational overheads associated with data management activities such as re-keying.

### **Be Mobile**

Oracle Cloud mobile solutions empower your teams to securely access from any location at any time. This means that purchase requisitions can be approved when you are out of the office and expenses can be submitted as soon as they are incurred. A mobile workforce, with better ways of working can support your organisations' property rationalisation programmes and reduce your office footprint.

### **About Inoapps**

Inoapps is a leading, global Oracle Platinum Partner and the 2016 Oracle Specialized Partner of the Year UKI for SaaS. We have 10 years of experience in delivering and supporting Oracle Solutions for the public sector, ranging from central to local government and emergency services organisations.
