

The Inoapps Private Cloud

Improve availability. Increase performance. Manage costs.

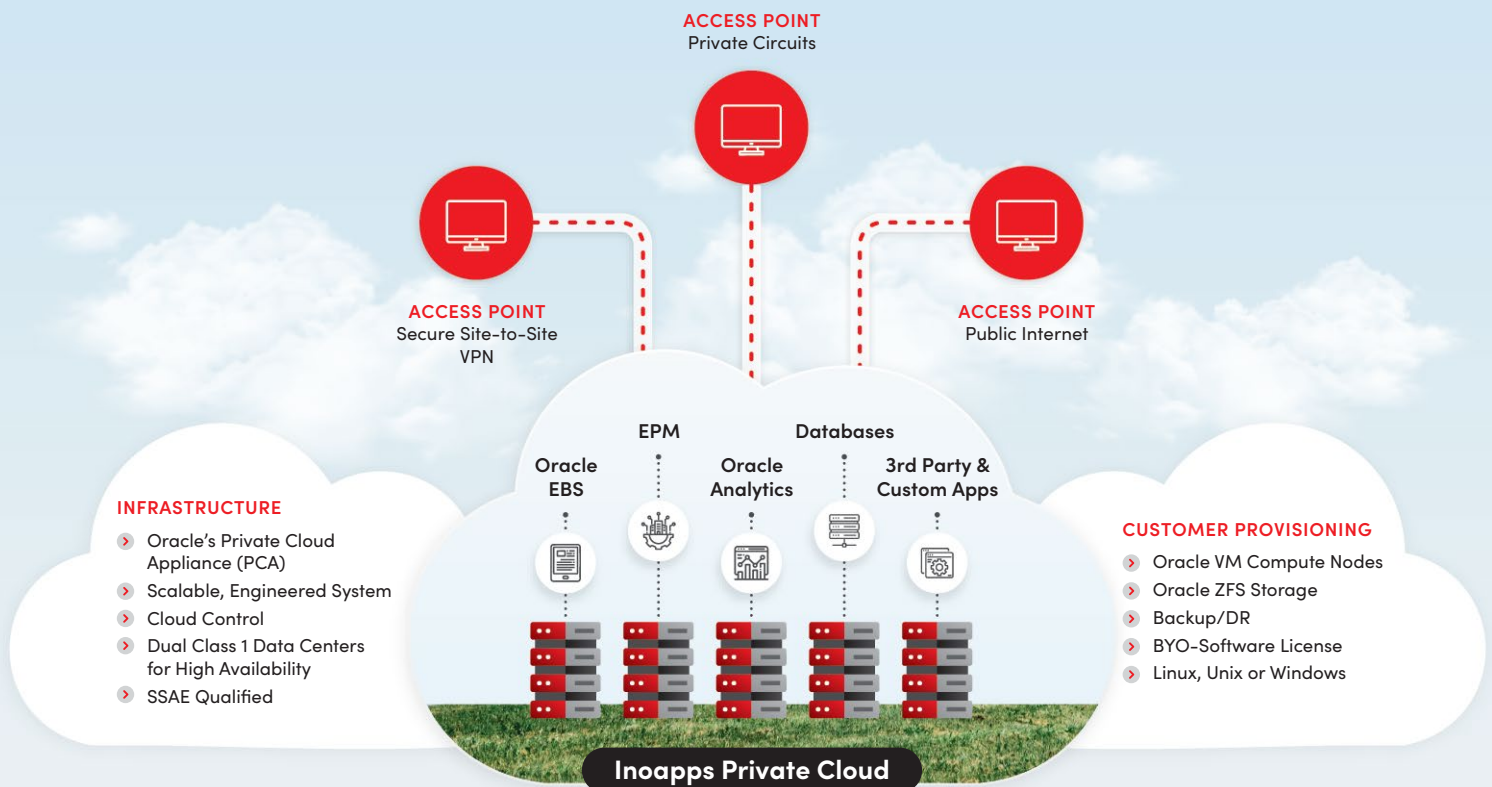

Hosting Oracle applications and databases inhouse can be costly, complex, and just plain frustrating. Expensive infrastructure, licensing fees, IT staffing retention and costs, and ever-increasing energy bills add up fast. Public Cloud is a credible alternative to internal hosting, but it does mean fitting in with the hyperscaler's standard models and comes with a lot less control.

With the Inoapps Private Cloud powered by Oracle Engineered Systems, you can harness Oracle's power in the cloud while keeping control of your infrastructure configuration.

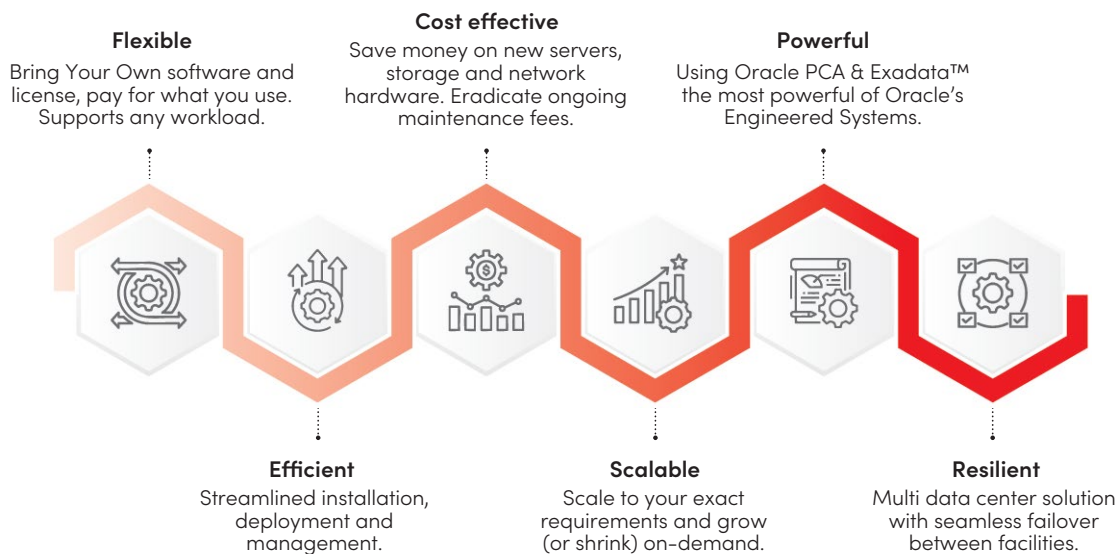

Meet the Inoapps Private Cloud

Leveraging Oracle's Engineered Systems, comprising Private Cloud Appliance (PCA) and Oracle Exadata™ technology, the Inoapps Private Cloud is a highly optimized, protected and cost-efficient computing platform for your workloads.

The platform is not limited to Oracle and can support all workloads, empowering you to consolidate your server-based computing in a private cloud environment designed around your business requirements.

With the Inoapps Private Cloud, you get a solution that's

Boost performance: Exadata for high performance computing needs

If you're looking for added performance and power, our Exadata™ platform gives you Oracle's top of the range data processing infrastructure—without the direct cost and overhead associated with owning and managing your own hardware.

Harness innovation: AI-enabled infrastructure and databases

By leveraging the latest Oracle core technology, you get the latest features, including AI and natural language services—bringing your legacy applications into the latest generation of advanced computing without the need for wholesale transformations and application upgrades.

Optimize your licensing

With Oracle's attractive Trusted Partitions licensing policies, we can also help you maximize the value of your Oracle technology investment. And if you go Exadata, you have several license options, including License Included.

Run your applications, your way

Looking to run Linux-based applications or Window-based workloads? While Inoapps Private Cloud is optimized for Oracle, it seamlessly supports non-Oracle workloads for ultimate flexibility.

With Managed Services from the Oracle experts

Tap into our world class Managed Services organization, joining over 130 enterprises globally who benefit from our end-to-end infrastructure, database and applications management services portfolio. Bottom line—you'll receive 24/7 stewardship of your entire environment so you can spend those 24/7s doing what's most important to you.
