Powering the Energy Sector with Oracle Cloud Solutions

Current opportunities in the Energy sector demand that companies have the flexibility and agility to respond quickly but often they are constrained by disjointed and outdated business systems. The digital age has opened up exciting opportunities for Energy companies to create operational advantage by reimagining their businesses at HQ.

As a global Oracle Platinum Partner, Inoapps offers complete integrated Oracle Cloud solutions for upstream, midstream, downstream and oilfield services companies. Delivering operational excellence from the desk to the drill to improve efficiency and productivity.

INOAPPS ENERGY CLOUD – WORKING IN PARTNERSHIP WITH INDUSTRY

Inoapps Energy Cloud provides a complete Oracle Cloud solution for Financials, Projects, Supply Chain and Human Resources to meet the needs of upstream, midstream, downstream and oilfield services companies.

Joint Venture Accounting Cloud (JVA)
Extends standard Oracle ERP to deliver the key functionality needed to track, manage and accurately account for the financial obligations and operations of your Joint Ventures in a single, fully integrated system.

Manifesting
Allows you to manage, schedule and track assets (Regulatory Manifest Documentation). Supports successful transit of assets with appropriate manifest documentation packs, 'dangerous goods' notes, via road, air or sea ('track and trace').

Asset Rental
Helps you keep track of rented assets (internal and external) and manage the movement of all your materials. Provides cross-project billing as well as integrated asset management with service and warranty tracking.

Resource Scheduling
Improves resource planning, time-writing and payroll management. Optimize utilization of your resources across projects, sites and departments etc.

HR Rostering
Enables you to manage your fleet of vessels and crew by maintaining data about the projects and activities that each vessel is working on around the world. The system offers the ability to enter and track current work schedules for each vessel as well as future projects allowing forward planning of all tasks.

Offshore Operations Planning
Deliver optimal utilization of flights and accommodations for mobile workforce. Balance occupancy demands with operational requirements to ensure efficiencies of work load.

Field Ticketing
Empowers your suppliers with self-service requisitioning to reduce manual processing and ensure timely payment. Minimizes downtime for essential goods and services.

Well Planning
Provides a single view of wells and assets allowing you to see the financial impact of up and down time, cost and revenue of wells by field, type, organization, etc.

Haulage
Supports effective management of deliveries for your internal logistics team as they deliver equipment and materials to site or customers.

Complex Billing
Accurately invoice and track your unique assets across countries and multi-currencies.

Enterprise Asset Management Analytics
Delivers improved insight into key metrics such as asset manufacturer, criticality, rig type and asset location.

Mobile GRN
Empowers your team in the field to execute the receipting process on mobile devices at the point of delivery for efficiency and accuracy in your supply chain process.
