

INOAPPS

Oracle Database Health Check ▶

Everyone needs a check-up from time to time and your Oracle Database is no exception. By carrying out a periodic Oracle database health check with Inoapps you can keep your database running smoothly and detect issues before they develop into something more serious. An Inoapps Oracle Database Health Check will allow you to:

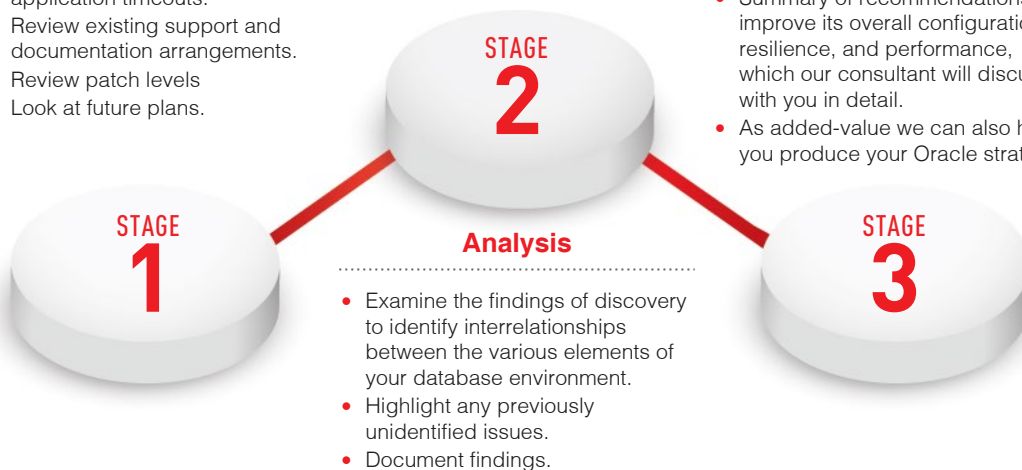

Inoapps tunes hundreds of Oracle databases every year, so we know exactly how to quickly identify potential risks to your database and operating systems. Our Oracle database health check lasts up to 2 days and consists of 3 stages:

Discovery

- We look at your database and storage environment, your applications and current maintenance strategy.
- Examine known issues such as application timeouts.
- Review existing support and documentation arrangements.
- Review patch levels
- Look at future plans.

Report & Recommend

- You will receive a detailed report of our consultant's findings on your database environment, including a breakdown of the environment as currently implemented.
- Summary of recommendations to improve its overall configuration, resilience, and performance, which our consultant will discuss with you in detail.
- As added-value we can also help you produce your Oracle strategy.

During the health check we perform a variety of activities depending on your setup.

Remote Delivery

We can provide our Oracle Database health check services remotely as long as you are able to provide secure external access to your Oracle database servers.

Why Inoapps?

Our experienced Technology Team, led by Oracle ACE James Anthony, tunes 100s of databases each year.

Certified database consultants with minimum 7 years' experience.

All versions covered.
