

DATASHEET

# Inoapps Oracle Asset Optimization

## A holistic review of your Oracle estate and roadmap

Oracle technology estates can be sprawling and complex. It's easy to see why when you combine hardware and software procured over time, an ever-changing licensing and product landscape, and each customer's unique usage, implementation and strategic direction.

The Inoapps Oracle Asset Optimization service gives you a comprehensive assessment of your Oracle technology infrastructure estate, providing a roadmap to an optimized, reduced total cost of ownership (TCO) model.

### Why would you need an assessment?

Over time, you may have procured licenses under a variety of terms, metrics and conditions, all of which are impacted by hardware refreshes and changing virtualization platforms. Knowing this, it's easy to see how you can end up with licenses that don't quite align with your organizational structure or strategic direction.

With Oracle Universal Credits, it's easy to lose track of consumption and, once exhausted, the only alternative is to procure more as unbudgeted spend. Understanding how your Oracle Cloud subscription is being used, on what technology, and at what rate, is paramount to ensuring you stay within your allocation while identifying areas of optimization that can free up credits for innovation.

With continued increases in computing power, systems sized even a few years ago represent potential for both server and software consolidation, often with compellingly short ROI periods. For example, a requirement of eight CPU cores to run can probably now run on a smaller number of cores, and factoring in modern Flash-based storage improvements further compounds these gains.

### Your organization stands to benefit if you:

- Upgraded, refreshed or changed your IT estate or architecture recently
- Moved to a Universal Credit Cloud subscription model
- Moved to a clustered or virtualized environment
- Have shelfware or products no longer in use
- Implemented new software products or options
- Materially increased or decreased the size of your workforce
- Made changes to your business structure following an acquisition, merger or divestiture
- Use non-Oracle hardware
- Operate an assortment of license metrics
- Have hardware renewals due in the next 12–24 months
- Are considering a cloud migration (to any cloud provider)
- Have performance or operational challenges

### Why the Inoapps Oracle Asset Optimization service?

**01**

**A full spectrum review**

The Inoapps Oracle Asset Optimization service takes a holistic view of your Oracle estate, providing a roadmap to an optimized, reduced total cost of ownership model.

**02**

**Focus on cost reduction**

In today's challenging economic conditions, our Oracle Asset Optimization service focuses on quantifiable cost reductions that provide direct business value.

**03**

**Software Asset Management**

There's no need to invest in expensive SAM tools. We provide access to our Advanced License Management tool for ongoing license management and spend optimization.

## What the Asset Optimization assessment considers

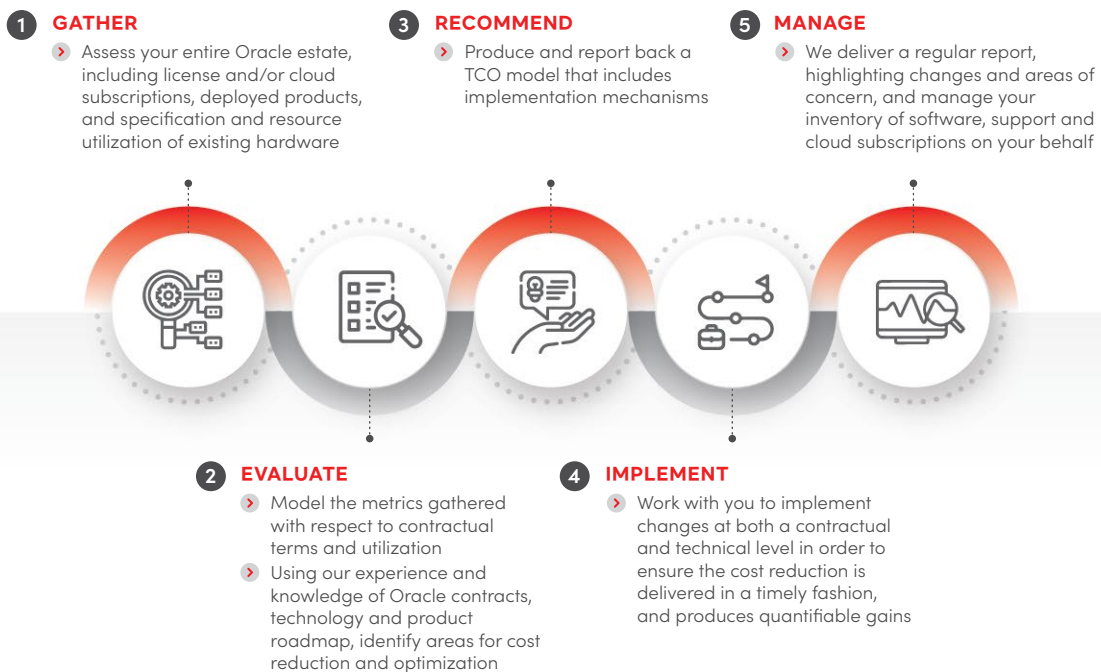

The assessment combines analysis of both the contractual/licensing and technical aspects of your estate. Too often, organizations focus only on one or the other, typically because of separation of the IT operations and procurement functions, or because each is equally complex and its own specialist area, and for fear of getting it wrong.

The assessment includes the following ROI quantifying metrics around existing system resource utilization:

- Comparison of current hardware (CPU, Input/Output) against latest generation technology (on-premises or cloud), based on benchmarks that quantify throughput.
- Oracle license estate, including deprecated/unused products.
- Soft benefits such as improved operational processes factored into the TCO / ROI.
- Options for replacement of areas of operational burden with hands-off PaaS services. For example the commoditization of identity management / SSO services or data integration tools means that for many organizations supporting, patching and upgrading these systems is an overhead that offers little in terms of value in return.

## How does the assessment work?

The assessment includes your current Oracle estate, licenses and subscriptions, contracts and support agreements. When performing an analysis of your Oracle entitlements, deployment practices, and utilization, we:

At Inoapps, we're always here to talk tech. Why not contact [askinoapps@inoapps.com](mailto:askinoapps@inoapps.com) for a 30-minute assessment to find out where you can cut costs and get more from your infrastructure with an Oracle Asset Optimization assessment?

### Inoapps Technology Optimization

With unrivalled Oracle technology platform expertise, Inoapps can cut through the complexity to ensure you are maximizing spend, performance, resilience and security of the Oracle technology and infrastructure you run and rely on.
