Inoapps Legacy Application Data Archiving Solution

Migrating to Cloud? What Are You Doing With Your Legacy Data?

Congratulations! You are moving your on-premises Oracle solution (be that E-Business Suite, PeopleSoft or JD Edwards) to the Oracle Cloud, or other application. To meet regulatory compliance for GDPR or audit purposes you will still need access to aspects of your legacy data for up to 7 years. Of course, it is both impractical and undesirable to migrate all the data from your legacy system to your new Cloud application. So, what are your options for managing legacy data to meet ongoing data retention and compliance requirements?

Option One

Do nothing. Keep your legacy on-premises system running as it currently does

Impact

- ☑ Increased cost of retaining licences for your on-premises application and database and running two applications
- ☑ Excess costs of maintaining hardware
- ☑ Legacy systems can be costly to support
- ☑ Security concerns as legacy platforms are fertile ground for cyber attacks
- ☑ Additional staff costs

Option Two

Move your database to Oracle Cloud Infrastructure with Inoapps

Inoapps delivers a quick and cost-effective solution to the challenge of archiving legacy data. We will:

Work in partnership with you in discovery to determine your requirements for the solution, using a questionnaire which determines details such as: the relative importance of performance requirements on reporting v. cost reduction, estimate of monthly interactions, your need for ad hoc v. pre-defined reports and other relevant information.

Lift your legacy database out of your old on-premises solution into the appropriate Cloud infrastructure.

Create a user-friendly front-end interface with OCI using Oracle's APEX tool - which comes FREE with your Oracle database licences.

Impact

- ☑ Reduce costs by retiring costly legacy applications and hardware
- ☑ Easily access legacy data for reporting and audit purposes
- ☑ Retain flexibility by adding future reports
- ☑ Remain compliant and avoid costly fines
- ☑ Simplify your IT infrastructure
- ☑ We supply the infrastructure and expertise, leaving your IT team to focus on strategic projects

Why Inoapps?

Completed several OCI lift and shift projects in the UK with customers such as Galliford Try, Technip & Baxters Food Group

The Cloud Experts. Taking customers to the Cloud since 2013

60+ years' APEX experience in our team

Award winning Database Team - Oracle's Partner of the Year for Database as a Service 2017/18.
