DATASHEET

# Inoapps Cloud Growth Accelerator

Implement and grow with Oracle Cloud Applications in four simple steps

Inoapps is here to help you quickly get up and running with Oracle Cloud Applications. The focus is to rapidly establish, implement and enable the functionality that delivers the biggest business benefits and gives you a firm foundation for both solution adoption and continuous improvement.

## 01 | Understand

We start with business-focused change sessions to introduce the Oracle solution and modules. Here we work out:

- ▶ Your business needs and objectives, now and looking ahead
- ▶ The most relevant modules and functions to meet your current core needs
- ▶ How automation will be used to accelerate the project
- ▶ How to handle data migration, testing, change management and ongoing maintenance
- ▶ Staff communication and adoption strategies
- ▶ How hands on you'd like us to be across areas like testing, training and change management

At the end of this phase, you will have clarity on the scope and phases of your initial implementation. We also capture what your future roadmap might look like, based on your longer term plans.

## 02 | Validate

Next we use intelligent automation tools to set up your Oracle Cloud environment and configure the agreed functionality.

- ▶ A subset of your data is migrated so you're working with real data when you test the solution
- ▶ We then test and validate the solution together to ensure the agreed processes are performing as expected
- ▶ The focus of this phase is to deploy the agreed core capability, but as your Oracle journey will be one of continuous improvement, we also capture areas for future enhancement and innovation

This is also when you start bringing your wider business users into the solution. Depending on your adoption journey, this could range from briefings from our change architect, to documentation creation or us managing the entire change process for you.

## 04 | Innovate

By this stage your business and system processes are in place and your Oracle Cloud solution is doing the agreed core things well. Staff are onboard and working with the new software and processes. It's now time to focus on enhancement and innovation and plan next steps.

- ▶ Prioritize your next top focus areas, aligned with your business strategy
- ▶ Create an adaptable, prioritized roadmap, to be delivered in manageable chunks
- ▶ Ongoing, we assess new capability delivered with each Oracle update to ensure you gain maximum benefit from your investment

## 03 | Adopt

Once testing is complete and you are satisfied everything is working as expected, it's time for the full data migration.

- ▶ Data is imported and key processes go live
- ▶ The project launch is communicated across your business
- ▶ Your remaining users are brought onboard, start using the software and working to the new operating model
- ▶ Training continues as needed
- ▶ Real time visibility into your business is in place and can be monitored, and analysis begins. How is the new system being used? Are there previous unknowns to be considered? Have priorities changed with usage?

At Inoapps, we're always here to talk apps. If you're considering a move to Oracle Applications, why not contact [askinoapps@inoapps.com](mailto:askinoapps@inoapps.com) to arrange a 30-minute chat?

### Business Transformation

Inoapps' outcome-based mindset and methodology ensures you see the highest value and most immediate returns from your Oracle applications. We match industry expertise and tooling with Oracle Modern Best Practices to offer rapid routes to value from your Oracle Applications investments—whether we're implementing and updating, supporting strategic change management or delivering a full Oracle Cloud managed service.
