

Licensing & Subscriptions | SaaS Subscriptions Review

Analyze, understand and optimize your Software as a Service investment

If you want to regain visibility, take control and expand your knowledge of the Oracle Software as a Service (SaaS) deployed across your business, this service is for you.

Our Oracle SaaS Subscription Review has been designed to help you gain insight into the Oracle SaaS processes that support your business. It gives you the information you need to make informed decisions about your SaaS asset management and procurement.

If any of this sounds familiar, then it's time to talk to Inoapps

How does the Oracle SaaS Subscription Review service work?

Inoapps provides Oracle SaaS Subscription Review services for Oracle Cloud Applications. The service includes:

Contractual analysis

Our licensing specialists analyze the clauses in your contracts and provide an inventory of your licensed products. This includes metrics and quantities subscribed to and how they're deployed in the cloud.

Data analysis

Based on reports from your SaaS Console, we analyze users, roles and privileges in order to:

- Establish which roles are customized
- Map users to roles and privileges
- Identify how much each user potentially costs to help reduce the most expensive usage if necessary
- Identify patterns in your data, such as recurring unlicensed usage
- Assess the impact of predefined roles within your environments

Actionable insights

You will receive a clear report that outlines product usage, configurations, areas for concern, and recommendations, along with detail of areas that are risk free.

Fixes and remodeling

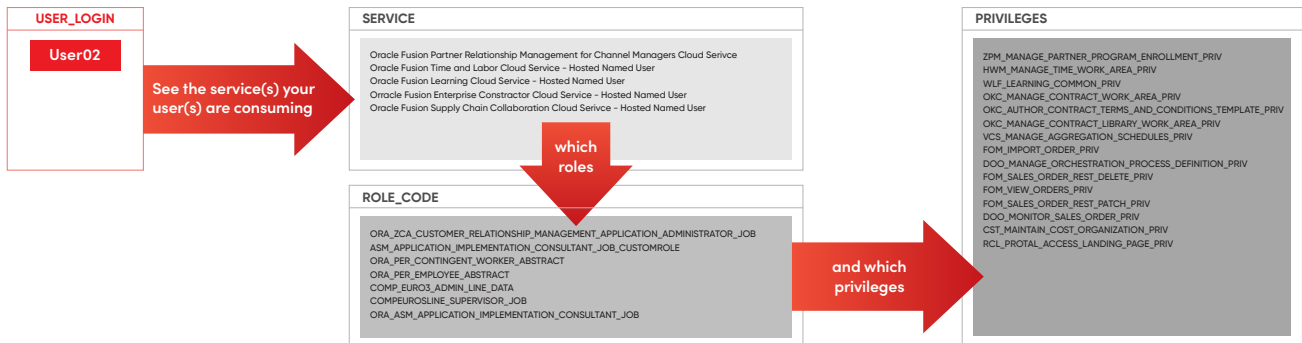

We help you fix the areas of concern as cost-effectively as possible. You also receive technical data that allows you to remodel without any changes to your live environments to help you plan your strategy and manage the changes.

Functional benefits

As part of our review of roles and benefits, we assess where functional enhancements could be made to support greater efficiency.

The Inoapps Analysis Tool

One of the key elements of our service is our Inoapps Analysis Tool. We use this to manipulate your data into easy to understand summaries that allow you to make informed decisions about your user base and the allocation of roles and privileges. It shows you what each user is accessing by role and privilege, along with associated costs, and is particularly powerful in multi service environments.

Why work with Inoapps?

From infrastructure to applications, procurement to decommissioning, Inoapps is here to help you through the entire lifecycle of your Oracle software asset management. With decades of experience in licensing and Oracle estate management combined with technical expertise, we can both identify potential licensing risks and help you fix them.

Our Oracle SaaS Subscription Review service will help you

- Address the confusion of predefined roles, custom roles and their impact on your subscription counts

- Gain control of your Oracle SaaS estate with increased visibility that enables you to model roles and user changes before you action them

- Uncover instances of unexpected usage and identify and address license deficits

- Minimize financial risks and penalties associated with non-compliance

7 out of 10

SaaS users will find 'unexpected usage' within their SaaS applications
